'EUML/NC' Aluminium Terminations

Principle Application:

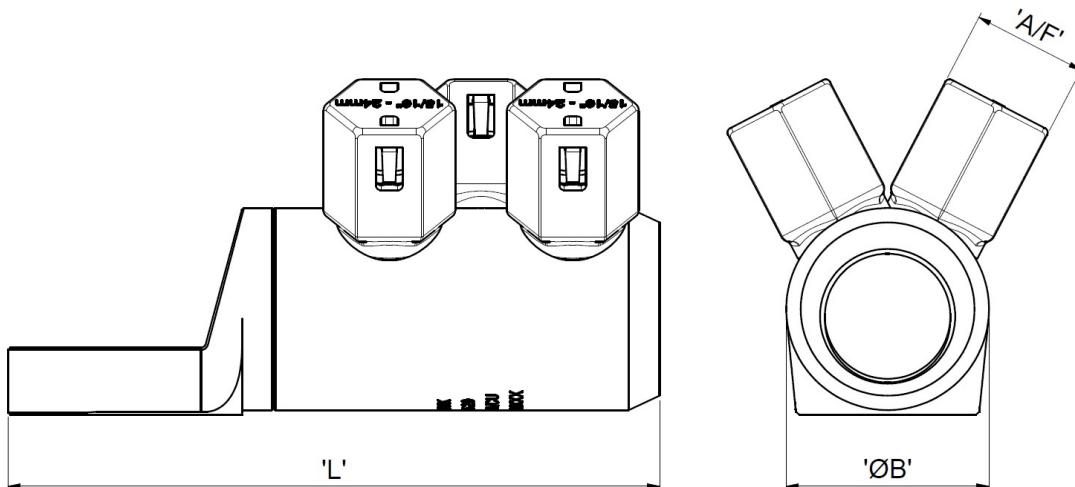

Straight jointing of circular stranded aluminium or copper conductors for all cable voltages up to and including 42kV.

Material: Aluminium Alloy (Electro-Tinned)

Test Specification: BS EN 61238-Class A

Test Report No: TTR/345

Fitting instructions:

1. Strip insulation from each core equal to the depth of the bore.
2. Wire brush the exposed conductor cores and wipe clean (optional).
3. Fit the appropriate sized cable centering ring (if required).
4. Align and position the conductor cores in each of the bores ensuring that the core is fully inserted to the center wall.
5. Fit the universal shear screws within the connector and torque tighten one turn at a time, using a 3/4" or 15/16" AF socket, until the bolts have sheared.
